

Rescue RR5

Reference# 100854

The RR5 Rapid Deployment Raft is perfect for fast-response and ice rescue. The raft surrounds one or more rescuers in an ultra buoyant and protective inflated perimeter. The RR5 allows a rescuer or rescue team to quickly reach a victim and safely retrieve them from the ice or a cold water rescue scene. The rescuer or rescue team can easily carry the RR5 to the edge of the ice, step into the craft, and run out across the ice to reach a victim. While on the ice, they are protected from falling through a fracture into the water. In a combination ice and open water situation, the RR5 can be paddled across open water or broken ice and water by one or two rescue technicians. Perfect for rapid response ice rescue equipment and should be part of every rescue responder kit.

Whats Supplied With The Inflatable?
